 abdelrahman.alaa.azab@gmail.com

[abdelrahman-alaa-portfolio.vercel.app](#)

Software Engineer and Computer & Intelligent Systems Engineering graduate with experience in full-stack web development, artificial intelligence, machine learning, and secure software design. Skilled in building scalable web applications, RESTful APIs, authentication systems, database architectures, and AI-powered solutions using modern technologies. Experienced in delivering end-to-end software projects from planning and development to deployment, with a strong foundation in software engineering principles, cybersecurity, and intelligent systems.

EDUCATION

Bachelor of Engineering in Computer & Intelligent Systems Engineering
Future University in Egypt (FUE)

2020 - 2025

Graduating in Fall 2025 with a specialization in Software Engineering, Artificial Intelligence, Machine Learning, Computer Vision, Databases, and Cybersecurity.

- Graduation project: AI-Based Interactive Virtual Clinic.

KEY ACHIEVEMENTS

- Created an AI-driven Virtual Clinic for medical service search and appointment booking.
- Developed a production-ready Printing & Packaging Platform for Saudi Arabia and the UAE.
- Designed scalable backends and secure authentication systems using modern practices.
- Built machine learning and computer vision solutions with CNN architectures.
- Completed various software projects in web development, AI, cybersecurity, and embedded systems.

PROFESSIONAL EXPERIENCE

Software Engineer - LamsatFan Printing & Packaging Solutions

May2026- Jun2026

- Developed an enterprise web platform for a printing and packaging firm.
- Created scalable frontend and backend systems to improve operations and customer engagement.
- Designed database architecture and API services for quotations and service management.
- Integrated multilingual support for Arabic and English.
- Enhanced website performance, optimized SEO, and improved user experience.
- Managed deployment and maintenance of production-ready infrastructure.
- Technologies used: React.js, Node.js, Express.js, MongoDB, REST APIs.

AI-Based Interactive Virtual Clinic (Graduation Project)

Oct2024- Jul2025

- Created an AI-driven healthcare platform for efficient service searches and appointment bookings.
- Developed backend services for scheduling, authentication, and service management.
- Integrated real-time communication between patients and providers.
- Built an AI chatbot using NLP for inquiries on diseases, symptoms, and tests.
- Designed advanced search and filtering for better accessibility and user experience.
- Ensured scalability and maintainability with structured architecture and Agile collaboration.
- Technologies used: Node.js, Express.js, MongoDB, React.js, NLP.

Machine Learning Developer - Traffic Sign Recognition System

Apr2024- May2024

- Developed a CNN model for multi-class traffic sign recognition.
- Utilized image preprocessing and data augmentation.
- Evaluated and optimized model for better classification accuracy.
- Technologies used: Python, Scikit-Learn, Computer Vision, CNN.

ADDITIONAL INFORMATION

- **Languages :**
 - Arabic (Native), English (Fluent)
 - **Certifications :**
 - Full-Stack Web Development — SEF Academy / Udemy
 - Machine Learning Certification — AITB
 - Data Science & Analytics — HP Foundation
 - Flutter Development — Udemy

- **Technical Skills :**
 - Programming Languages: Python, JavaScript, Java, C++, Dart
 - Frameworks & Libraries: Node.js, Express.js, React.js, Flutter
 - Web Development: HTML5, CSS3, REST APIs, MVC Architecture, JWT Authentication, Middleware, API Security
 - Databases: MongoDB, MySQL, Firebase Firestore
 - AI & Machine Learning: Scikit-Learn, Pandas, NumPy, Data Preprocessing, Model Training & Evaluation
 - Computer Vision: CNNs, Image Processing, Data Augmentation
